

DCS® High Performance Vacuum

The Bona DCS® “HP” (High-Performance) Vacuum is the center of Bona’s High-Performance line of dust containment equipment. The twin 1.6 hp motors generate substantially greater air flow or “sustained CFM” compared to conventional single-motor vacuums. This “sustained” power is vitally important when trying to contain fine wood dust and when connecting multiple machines to the HP Vacuum.

The HP Vacuum cart is equipped with “Automatic Start” capability, automatically turning on and off with the buffer or edger. A 120-volt duplex connection box (see inset) with a heavy duty relay allows the connection of the buffer or edger to the vacuum unit, all operating with only one 12/3 extension cord.

The DCS® HP Vacuum, the most powerful and convenient hardwood floor dust-containment vacuum available, comes complete with a 1-year warranty, non-marking wheels, heavy-duty extension cord, two AC outlets, tool caddy, floor tool accessories, 25’ of hose, and an owner’s manual.

Technical Specifications

Motor	Two 1.6 hp, 120 Volt, 7.2 AMP per motor, 60HZ
Machine Weight	55 Lbs.
CFM	160
Water Lift	84"
Filtration Surface	2,392 Sq. In.
AC Outlets	2
