

Viking Combination Edger

The Bona® Viking Combination Edger is a uniquely designed and precision built wood floor sanding machine for use along open walls and under toe-kicks. The Viking can be used as a bag edger or with the Bona DCS®-Dust Containment System to ensure virtually dust-free edging.

The Viking's state-of-the-art design is engineered for performance, convenience and durability, providing unequaled power, superb balance and superior dust pick-up.

The most unique feature is the "open-throat" design. The drive belt is located above the sanding disc in a separate enclosure to create unobstructed air flow in the vacuum chamber. This unimpeded air flow results in exceptional dust pick up. When operated on the DCS®—Dust Containment System, the Viking is virtually dust free.

Maximum power transfer from the motor to the sanding disc is the secret to the Viking's unsurpassed performance. No slippage occurs. This unique drive mechanism is designed with a heavy-duty 3/8" cogged belt which drives a large 6 1/4" power gear connected directly to the flexible, steel sanding disc. The positive-traction drive system coupled to the most powerful motor available in floor edgers (2.8 HP), provides an unbeatable combination. The twin brush motor spins the standard-sized 7" disc smoothly at 3,800 RPM.

The "Easy Grip" handles pivot 270 degrees to suit any operator preference. This, combined with the Viking's superb balance and free-rolling, non-marking urethane wheels, truly make this machine a pleasure to use. The specially designed Osram/Sylvania fluorescent light with long-life replacement bulbs and high-impact housing adds further to the ergonomics of the machine.

Technical Specifications

Motor	2.8 HP, 115 Volt
Machine Weight	32 lbs.
Sanding Disc Size	7" Standard
Sanding Disc Speed	3,800 RPM
Combination Sanding Disc	siafast Backed or Standard
High Output 9 Watt Fluorescent Work Light in High Impact Molded Case	
Cast Aluminum Body • Non-Marking Urethane Wheels • DCS Ready
